NASIR HAYAT

DevOps & DevSecOps Engineer • Cloud-Native & Automation

Peshawar, Pakistan | +92 333 9495197 | nasirhayat.dev@gmail.com | linkedin.com/in/nasirhayat | github.com/nasirhayat028 | nasirhayat.me

PROFESSIONAL SUMMARY

Hands-on DevOps & DevSecOps Engineer with demonstrated expertise in containerization, Kubernetes orchestration, automated CI/CD pipelines, and declarative GitOps delivery. Specializes in shift-left application security (secret detection, SAST, container vulnerability triage, and DAST), infrastructure reliability, and Linux systems. Passionate about building reproducible, observable delivery workflows and bridging software development with secure cloud-native infrastructure.

TECHNICAL SKILLS

Cloud & Infrastructure: Linux (Bash CLI, Process/Network Troubleshooting, Systemd), AWS (EC2, S3, IAM, CloudWatch, VPC, Security Groups)

Containers & K8s: Docker (Multi-stage builds, Compose, Networks), Kubernetes (kind, Namespaces, Pods, Deployments, Services, ConfigMaps, Secrets, NGINX Ingress)

CI/CD & GitOps: GitHub Actions, Argo CD (Declarative GitOps, Desired State Sync), Jenkins, Git, Docker Hub

DevSecOps & Security: Gitleaks (Secret Scanning), npm audit, SonarQube (SAST), Trivy (Container CVEs), OWASP ZAP (DAST), CSP & HTTP Security Headers

Observability & Tools: Prometheus, Grafana, Vitest, Node.js, Python, Kotlin, React, MongoDB

FEATURED ENGINEERING PROJECTS

End-to-End DevSecOps Delivery Pipeline & Kubernetes GitOps Platform 2026

Technologies: GitHub Actions, Docker, Kubernetes (kind), Argo CD, NGINX Ingress, Trivy, SonarQube, Gitleaks, OWASP ZAP

- **Automated CI/CD Delivery:** Engineered full GitHub Actions pipeline running `npm ci`, Vitest frontend tests, and Node.js backend integration tests, building version-tagged Docker images (`build-<num>`) pushed to Docker Hub.
- **Shift-Left Security Architecture:** Integrated a 4-tier security barrier into CI: **Gitleaks** (credential detection), **npm audit** (high-severity dependency gating), **SonarQube** (static analysis & code quality), and **Trivy** (container vulnerability triage).
- **GitOps Reconciliation:** Deployed **Argo CD** on a local multi-node **kind** cluster (`dev-cluster`, namespace `noteapp`) to automate continuous desired-state synchronization and cluster health monitoring.
- **Cloud-Native Ingress & Routing:** Configured **NGINX Ingress Controller** to route external traffic (`notes.local`) to frontend and backend ClusterIP services with internal MongoDB isolation.
- **DAST & Response Hardening:** Executed containerized **OWASP ZAP** baseline scans; remediated missing Content-Security-Policy alerts by configuring enforcing CSP, X-Frame-Options, X-Content-Type-Options, and Referrer-Policy on NGINX.

TeamSyncAI – Android Collaboration & Organizational Workspace Platform 2025 – 2026

Technologies: Kotlin, Jetpack Compose, Hilt DI, Firebase Auth/Firestore/Storage, Unit Testing, ProGuard/R8

- **Architecture & RBAC:** Designed scalable collaborative platform with multi-tenant workspace isolation and role-based access control (Owner, Admin, Manager, Employee), featuring attendance tracking, real-time chat, and announcements.
- **Reliability & Build Hardening:** Maintained high software quality with **19/19 passing automated unit tests**, strict MVVM/Repository separation, and verified release/R8 obfuscation builds.

Multi-Model AI Consensus Engine – Browser Extension 2026

Technologies: Chrome Manifest V3, TypeScript, React, OpenAI API, Anthropic Claude API, Google Gemini API

- **Multi-LLM Orchestration:** Architected Chrome extension comparing responses across OpenAI, Gemini, and Claude models to surface agreement, variance, and uncertainty signals rather than trusting single-model output.
- **Security & Extensibility:** Built clean provider abstraction layers with schema validation and secure client-side API key isolation adhering to Manifest V3 security requirements.

WORK EXPERIENCE

CodeOps Pro – **DevOps Engineering Intern** May 2025 – Jul 2025 (Remote)

- Containerized multi-tier applications using **Docker** and multi-stage builds, standardizing development and deployment environments.
- Configured **Kubernetes** workloads (Deployments, ClusterIP/NodePort Services, ConfigMaps, and Secrets) for isolated application delivery.
- Deployed **Prometheus & Grafana** monitoring stacks to visualize node resources, container metrics, and application performance.
- Troubleshot Linux system processes, file permissions, and container networking to ensure reproducible release cycles.

EDUCATION

Kohat University of Science & Technology (KUST)

BS in Computer Science • 7th Semester

2023 – 2027 (In Progress)

CERTIFICATIONS & TRAINING

- **Certified Kubernetes Administrator (CKA Track)** – KodeKloud
- **AWS DevOps Engineering Program** – Honhar Tech Initiative
