NASIR HAYAT

DEVOPS & DEVSECOPS ENGINEER

Cloud-Native Infrastructure • CI/CD & Security Automation • Full-Stack & AI Systems

Peshawar, Pakistan | +92 333 9495197

nasirhayat.dev@gmail.com | linkedin.com/in/nasir-hayat-4515202a2 | github.com/nasirhayat028

PROFESSIONAL SUMMARY

DevOps & DevSecOps Engineer skilled in automating CI/CD pipelines, securing cloud-native infrastructure, and managing Kubernetes workloads. Hands-on experience integrating shift-left security (SAST, secrets detection, container scanning, and DAST) and declarative GitOps with Argo CD. Experienced in Linux administration, AWS cloud services, and secure containerized deployments.

TECHNICAL SKILLS

DevSecOps & CI/CD: GitHub Actions, Argo CD (Declarative GitOps), Jenkins & Groovy Shared Libraries, Docker Hub, Gitleaks, Trivy (Container CVEs), SonarQube (SAST), OWASP ZAP (DAST), npm audit, CSP & Security Headers

Cloud & Orchestration: Kubernetes (kind, Namespaces, Pods, Deployments, Services, ConfigMaps, Secrets, NGINX Ingress, NetworkPolicies, Limits/Quotas, PDB), AWS (EC2, S3, IAM, VPC, CloudWatch, ECR), Linux (Bash CLI, Systemd, Network Troubleshooting)

Full-Stack & Systems: TypeScript, JavaScript, Node.js, Express.js, React, Vite, Tailwind CSS, PostgreSQL, MongoDB, RESTful APIs, Golang (foundations)

Mobile & AI Engineering: Kotlin, Android Jetpack Compose, Hilt DI, Firebase (Auth/Firestore/Storage), Chrome Extensions (Manifest V3), Multi-LLM API Orchestration (OpenAI, Claude, Gemini), Autonomous Agent Workflows

Observability & Testing: Prometheus, Grafana, Vitest, Supertest, Playwright (E2E & Accessibility testing), axe-core

PROFESSIONAL WORK EXPERIENCE

CodeOps Pro – DevOps Engineering Intern

2026 (Remote)

- Containerized multi-tier applications using **Docker** and multi-stage builds, standardizing development environments and deployment consistency.
- Configured **Kubernetes** workloads (Deployments, ClusterIP/NodePort Services, ConfigMaps, Secrets) and deployed **Prometheus & Grafana** monitoring stacks for container performance visibility.

Rhombix Technologies – DevOps & Linux Intern

2026 (Remote)

- Automated Linux system administration tasks, user permissions, and directory structures across Ubuntu environments via modular **Bash scripting**.
- Monitored system processes, memory/disk utilization, and network sockets using native Linux CLI tooling, optimizing package management and system stability.

FEATURED PROJECTS • Stage 1: DevSecOps & Cloud-Native Platforms

End-to-End DevSecOps Delivery Pipeline – Kubernetes GitOps Platform

2026

GitHub Actions, Docker, Kubernetes (kind), Argo CD, NGINX Ingress, Trivy, SonarQube, Gitleaks, OWASP ZAP, Vitest, Node.js

- **Automated CI/CD Delivery:** Built automated GitHub Actions pipeline executing unit and integration tests, creating version-tagged Docker images (`build-<num>`) pushed to Docker Hub.
- **Shift-Left Security Architecture:** Integrated 4-tier security barrier into CI: **Gitleaks** (credentials detection), **npm audit** (dependency gating), **SonarQube** (code quality), and **Trivy** (container vulnerability triage).
- **GitOps & DAST Hardening:** Reconciled desired Kubernetes states via **Argo CD** on a multi-node **kind** cluster; routed traffic via **NGINX Ingress** and executed containerized **OWASP ZAP** scans with strict CSP and HTTP security response headers.

FEATURED PROJECTS • Stage 1 (Cont.): Cloud-Native Hardening & Reusable CI/CD

DevTrack PMS – Full-Stack App & K8s Hardening 2026

React, Vite, Node.js, Express, MongoDB, Docker, Kubernetes NetworkPolicies, LimitRanges, PriorityClasses, PDB

- **Security Hardening & Microsegmentation:** Authored Kubernetes **NetworkPolicies** restricting MongoDB ingress exclusively to authorized backend pods, preventing lateral container network access.
- **Resource Governance & Multi-stage Builds:** Implemented **LimitRanges**, resource quotas, **PriorityClasses**, and **PodDisruptionBudgets (PDB)**; created multi-stage alpine Dockerfiles running as non-root user (`nasir`).
- **High Availability & Lifecycle Operations:** Configured readiness/liveness probes, health checks, and rolling update strategies ensuring seamless zero-downtime container lifecycles.

Jenkins Enterprise Shared Libraries – Reusable CI/CD Automation 2026

Groovy, Jenkins Pipeline, Git, Docker, Automation Architecture

- **Standardized Pipeline Architecture:** Developed modular, reusable Jenkins shared libraries (`vars/`) standardizing build, test, Docker publishing, and deployment workflows across repositories.
- **CI/CD Best Practices:** Built parameter-driven stages, environment-agnostic steps, and error handling mechanisms to streamline developer onboarding and pipeline maintainability.

FEATURED PROJECTS • Stage 2: AI Automation, Mobile & Systems Architecture

Social Media Automation Agent – Multi-Platform Content Workflow 2026

Python, Multi-Agent Architecture, API Integration, Automation Pipeline

- **Autonomous Workflow Pipeline:** Architected an automated agent pipeline for multi-platform content planning, automated drafting, and cross-platform formatting (LinkedIn, YouTube, Instagram) with human-in-the-loop verification.
- **Resilience & Error Recovery:** Implemented rate-limiting recovery, structured schema validation, and persistent execution state for uninterrupted autonomous tasks.

Multi-Model AI Consensus Engine – Browser Extension 2026

Chrome Manifest V3, TypeScript, React, OpenAI API, Anthropic Claude API, Google Gemini API

- **Multi-LLM Orchestration:** Architected Chrome extension comparing responses across OpenAI, Gemini, and Claude models to surface agreement, variance, and uncertainty signals with secure client-side API key isolation.
- **Security & Extensibility:** Built clean provider abstraction layers with schema validation and strict adherence to Manifest V3 security requirements.

TeamSyncAI – Android Collaboration & Workspace Platform 2026

Kotlin, Jetpack Compose, Hilt DI, Firebase Auth/Firestore/Storage, Unit Testing, ProGuard/R8

- **Native Android Architecture & RBAC:** Designed scalable collaboration platform with multi-tenant workspace isolation, role-based access control (Owner, Admin, Manager, Employee), real-time chat, and attendance tracking.
- **Reliability, Security & Hardening:** Maintained high software quality with **19/19 passing automated unit tests**, strict MVVM separation, verified release/R8 obfuscation, and fine-grained Firebase security rules.

EDUCATION

Kohat University of Science & Technology (KUST)

BS in Computer Science

2023 – 2027

Coursework: Distributed Systems, Operating Systems, Computer Networks, Database Systems, Software Engineering

CERTIFICATIONS & PROGRAMS

- **AWS re/Start Graduate / Coursework**
  Cloud Architecture, EC2, S3, IAM, VPC, Linux Administration, Networking & Security
- **AWS DevOps Engineering Program**
  Cloud CI/CD Automation, Infrastructure as Code & Scalable Delivery
